## **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-16, in the reply filed on 04/11/05 is acknowledged.

Applicant's election of Group I, claims 1-16, in the reply filed on 04/11/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

# Information Disclosure Statement

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

#### **Drawings**

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 217 in paragraph [0040], line 10. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing

Art Unit: 3724

date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

4. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference characters "112" and "201" have been used to designate both finished components and the out feed table, and the second cutting assembly and cutting blade, respectively. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

#### Specification

- 5. The abstract of the disclosure is objected to because the application is for an apparatus, not a method as stated in line 1. Also, "it" should be changed to –its-- in the last line. Correction is required. See MPEP § 608.01(b).
- 6. The disclosure is objected to because of the following informalities: paragraph [0036], last line, "108" should be changed to --200--; paragraph [0038], lines 1 and 4, "saw-frame" and "home position" have the same element number and one should be changed; paragraph [0038],

Application/Control Number: 10/681,884 Page 4

Art Unit: 3724

line 7, "32" should be changed to --B1--; paragraph [0045], last line, "5,44,635" should be --5,444,635--; paragraph [0047], line 1, "in" should be changed to --is--

Appropriate correction is required.

## Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claims 1-4, 6 and 7-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson (4,574,670). Johnson discloses linear feed assembly 23, 13, 15; automated cutting assembly shown in figure 1; cutting blade 19; pivot axis C; vertical axis Z; bevel axis B; apparatus is capable of making a stab cut; transverse axis Y; computer assembly in column 7, lines 50-65; it is inherent in figure 1 that the diameter of the blade 19 makes a maximum cut longer than the length of the compound cut; the apparatus is capable of cutting a workpiece at other than a ninety degree bevel cut due to elements 49 and 53, which allow the apparatus to cut any bevel angle, including a ninety degree bevel cut; the apparatus is capable of making bevel cuts, transverse cuts and scarf cuts; upstream feed assembly 13; downstream feed assembly 15; sensing the presence or absence of a workpiece, determining the length of a workpiece and position the workpiece for cutting at a selected length in column 2, lines 7-24.

#### Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/681,884 Page 5

Art Unit: 3724

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

10. Claims 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson. Johnson discloses the claimed invention except for a maximum cut length of at least 6 inches and 10 inches. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a maximum cut length of at least 6 inches and 10 inches, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205USPQ 215 (CCPA 1980). It would have been obvious to provide a maximum cut of at least 6 inches and 10 inches in order to provide the apparatus the capability to cut objects of various shapes and sizes.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Isaac Hamilton whose telephone number is 571-272-4509. The examiner can normally be reached on Monday through Friday between 8am and 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Allan N. Shoap can be reached on 571-272-4514. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
